

International Private Line Circuits

International fiber connectivity within West Africa for Carriers, ISPs and Enterprises with operations across the region

Product Description

Suburban IPLC is a digital point-to-point circuit with a defined service, interface and data rate. This service provides direct connections between customer locations using highly reliable digital private circuits that can carry voice, data and image or any combination of these. Suburban IPLC is permanently available, 24 hours a day, and is charged at a fixed rental, regardless of usage - giving you optimal budget control.

Suburban IPL offers connectivity across West Africa, Europe, Asia and to the United States. Suburban has extensive networks in West Africa, offering national services in Nigeria and Benin. In total, the Suburban network (WA-Net) covers 10 countries and more than 50 cities. Local access to the customer site is achieved using Suburban fibre connections or via local partners.

Suburban RFC is available in the following line speeds (depending on specific route)

- 2 Mb/s (E1)
- 45 Mb/s (DS-3)
- 155Mb/s (STM-1)
- 622Mb/s (STM-4)
- 2.5Gb/s (STM-16)

Suburban is your single interface for all elements of the service. For the customer this has definite benefits

- A 24 hours per day customer enquiry service is available in each country
- Composite price for end to end service
- A single contract

Key Benefits of the Suburban Broadband DLLC
